Integrating Media Solutions

Beck TV is a premier system integrator for the broadcast media industry

kvm-tec is always excited to work with BeckTV on any project. When they contacted us about the world's first esports industry campus from Nerd Street Gamers and their need for high performance KVM over IP extenders, we were eager to show off our technological capability.

CASE STUDY

the challenge

beck^{TV}
Integrating Media Solutions

BeckTV was looking for a modern, high-performance IP- based KVM in combination with access to virtual machines to create a matrix switching system. It was important for Nerd Street Gamers to broadcast the video feed to all viewers on the campus and enable seamless switching, so no one misses the game time action.

We equipped BeckTV with our new generation of high performance KVM extenders from our Flexline series. Twenty endpoints were installed, and the product of choice was our Masterflex Full HD extender. The Masterflex offers customers a choice of single and dual fiber or copper, and embedded enabling 4 singles or 4 duals to fit in each 1 RU rack. Saving space was very important for BeckTV.

Furthermore, BeckTV wanted to combine access to virtual machines in the switching system. The product of choice was our Gateway2go, for remote workplaces and access to the switching system. Gateway2go is connected to the Internet via a VPN tunnel and can be connected from the remote workstation to any PC in the matrix switching system.
